

Comment on BPL transmission. Amateur radio is a valuable resource that must be protected. Under part 15 we are protected from powerline interference. Now you want to put Broad band transmissions on the line. I have personal experience with the power companies and their equipment is in a terrible state of disrepair. I have an active complaint filed against them at this time. Why do you think their sloppy equipment and lines will be any better when subjected to Broad band transmissions. They cannot take care of what they have let alone add more to it. Think long and hard before you approve such a foolish venture. They cannot and will not handle it!!!!
